AquaKlear Treatment Systems
Residential | Commercial

AquaKlear’s rugged concrete tanks are manufactured in Central California. We’ve partnered with Don Chapin Precast, a Salinas based construction firm, to bring you California’s finest engineered concrete treatment systems on the market: AquaKlear

Using state-of-the-art equipment and quality materials, our well-trained staff produce the AquaKlear treatments with no compromise to quality or value. Here’s a peek at our manufacturing process:

Each AquaKlear tank is reinforced with over 1,100 feet of steel re-bar

The AquaKlear tanks are manufactured “upside-down”

The AquaKlear lid is poured separately
After a short cure time, the AquaKlear components are ready to be stripped from the forms.

The AquaKlear tank is carefully rotated on a bed of sand until it's in the upright position.

After a watertight test, the interior plumbing is assembled & the lid is secured in place.

Your completed AquaKlear system is now ready for delivery!
